

Important information about the end of life for AUER Success, AUER Regie and AUER Safety

The construction software AUER Success, AUER Regie and AUER Safety have many users in Austria, but is unfortunately outdated. We want to provide our customers the most modern technologies to finish their daily tasks. That's why we work on the further development of our products every day.

Over time, old software unfortunately becomes incompatible and error-prone, so it has to be discontinued. This is now the case of the AUER product line. We have decided to discontinue the product support and updates. We would like to set our focus on the development of the next generation: SUCCESS X.

SUCCESS X is our software that meets current and future needs of the building industry. Because of the compatibility with the old AUER product line you won't lose your current projects. As an AUER user you can switch to SUCCESS X without any additional cost. Please read the note at the end of this letter.

The support of the AUER products will end on 31.12.2023. After that there won't be any further updates or software support. Needless to say that you can continue to use the software after the support expires. Unfortunately we cannot guarantee compatibility with other NEVARIS products after the expiration date.

You will receive the timely notice of termination of AUER products by mail in the coming days.

Please keep in mind: until the end of 2021 you have the possibility to move on to SUCCESS X for free. Get your upgrade today, you won't regret it.
